Introduction

The City of North Pole has adopted by reference the *1997 Uniform Administrative Code*, including its methodology for calculating permit fees. According to the City of North Pole Municipal Code amendment to the Administrative Code:

The determination of value or valuation under any of the provisions of these codes shall be made by the building official. The value to be used in computing the building permit and building plan review fees shall be the total value of all construction work for which the permit is issued as well as all finish work, painting, roofing, electrical, plumbing, heating, air-conditioning, elevators, fire-extinguishing systems and other permanent equipment. Valuation shall be determined in accordance with the latest edition of the Building Safety Journal data chart as published by the International Code Council or based on the final contract amount, whichever is greater. When calculating the valuation utilizing the building valuation data chart the regional modifier shall be (1.3). A copy of the bid award may be required by the building official. In any case the final determination of value or valuation under any of the provisions of these codes shall be made by the building official. (Title 15, Section 15.04.050)

The Building Department has made the Building Fee Guide to help customers estimate permit and plan review fees. Any figures you generate are only estimates and the Building Department makes the final determination of permit fees. A worksheet is included with this guide to help you estimate your permit fees.

Each building project is unique and the permits required may vary. The permit fees for a project will depend upon the permits it requires. The total permit fees for a project may be a combination of one or more of the following:

- Building Permit and Plan Review
- Electrical Permit and Plan Review
- Mechanical Permit and Plan Review
- Plumbing Permit and Plan Review
- Storm Water Permit and Plan Review
- Utility Tie-In Permit and Utility Tie-In Inspection
- Excavation Permit and Plan Review
- Excavation Bond (returned if right-of-way restored)
- Fire Marshal Permit[1]

The simplest way to estimate Building Permit and Plan Review fees is to use the Building Permit Fee Estimation Table. Using this method does not provide estimates for any other permits that the Building Department may require for your project. If you want to refine your cost estimate, you can find additional guidance and resources in this guide.

[1] Multi-Family, Commercial, Industrial and Institutional projects may require a Fire Marshal's Permit. The Building Department DOES NOT issue Fire Marshal Permits. Contact the Fire Marshal's office at 907-451-5200 to determine if your project requires a Fire Marshal Permit.

Determining Value of Project

The complexity of your project and how good an estimate you want will affect the effort you will need to invest when estimating the permitting fees. Below are directions you can use to help you estimate the value of your project and to calculate permit fees.

Step 1: Determine the total value of your project.

There are two approaches to estimate the value of a project—square footage cost of the project or contractor's bid price. The Building Department most frequently uses the square foot approach to estimate the value of projects like new construction of a building or an addition. The Building Department most frequently uses the contractor's bid approach for projects like renovation of a building, a "small" project like replacing a roof, adding a deck or installation of new heating system. The contractor's bid approach is also used for very large and complex projects where the square foot approach does not provide a reliable valuation. By City Code, the City uses the method that assigns the highest value to your project. The Building Department makes the final determination of the value of the improvement.

<u>Square Footage Approach</u>

First, identify what "Group" best describes your project. According to the *2009 International Building Code* (IBC), Chapter 3: Use and Occupancy Classification, Section 302 Classification:

Structures or portions of structures shall be classified with respect to occupancy in one or more of the groups listed below. A room or space that is intended to be occupied at different times for different purposes shall comply with all of the requirements that are applicable to each of the purposes for which the room or space will be occupied. Structures with multiple occupancies or uses shall comply with Section 508. Where a structure is proposed for a purpose that is not specifically provided for in this code, such structure shall be classified in the group that the occupancy most nearly resembles, according to the fire safety and relative hazard involved.

1. *Assembly (see Section 303): Groups A-1, A-2, A-3, A-4 and A-5*
2. *Business (see Section 304): Group B*
3. *Educational (see Section 305): Group E*
4. *Factory and Industrial (see Section 306): Groups F-1 and F-2*
5. *High Hazard (see Section 307): Groups H-1, H-2, H-3, H-4 and H-5*
6. *Institutional (see Section 308): Groups I-1, I-2, I-3 and I-4*
7. *Mercantile (see Section 309): Group M*
8. *Residential (see Section 310): Groups R-1, R-2, R-3 and R-4*
9. *Storage (see Section 311): Groups S-1 and S-2*
10. *Utility and Miscellaneous (see Section 312): Group U*

You can find summary descriptions of the different groups in Appendix A: Building Groups List. Review the Building Groups List to identify the group that most closely matches your project.

Second, determine the Type of Construction you will use for your project. According to the *2009 International Building Code* Council, Chapter 6, Section 602, Construction Classification:

Buildings and structures erected or to be erected, altered or extended in height or area shall be classified in one of the five construction types defined in Sections 602.2 through 602.5. The building elements shall have a fire-resistance rating not less than that specified in Table 601 and exterior walls shall have a fire-resistance rating not less than that specified in Table 602. Where required to have a fire-resistance rating by Table 601, building elements shall comply with the applicable provisions of Section 703.2. The protection of openings, ducts and air transfer openings in building elements shall not be required unless required by other provisions of this code.

There are five types identified by Roman numerals—I, II, III, IV and V. Most of these types have sub-types labeled A or B. Historically, most projects in the City of North Pole have been Type VB. You can use the IBC definitions to identify your Type of Construction. The sections of the IBC related to determining the building type can be found in Appendix B: Types of Construction.

Third, use Table 1 Square Foot Construction Cost to determine square foot cost of your project. The Group is listed in the left-hand column and Type Construction is listed across the top of the table. Where the two categories intersect is the square foot cost of your project. Multiple the square footage of your project by the square foot cost to get an estimated value of the improvement. All tables are found at the back of the guide.

<u>Contractor's Bid Approach</u>

Not all projects' value can be easily determined with the Square Footage Approach. As described above. If you have a contractor's bid you can use this value to estimate your project's permit fees. The Building Department will require you to submit this bid if you want to use this approach to determine the value of your improvement.

Step 2: Calculate Building Permit Fee and Plan Review Fee

With the value of your project determined in Step 1, you can estimate your Building Permit Fee. The Building Department uses Table 2 Building Permit Fees to calculate a Building Permit Fee. You can do the math as described in Table 2 to estimate the value of your project. A simpler way to estimate the Building Permit Fee or your project, is to use Table 3 Building Permit Fee Estimation Table. In the right-hand column of Table 3, find the value that most closely matches the value of your project. Read across the table to find the estimated Building Permit Fee and Plan Review Fee. The Building Department calculates the Plan Review Fee as 65% of the Building Permit Fee.

Step 3: Calculate Electrical, Mechanical and Plumbing Permit Fees

The Building Department uses the *1997 Uniform Administrative Code* tables to determine Electrical, Mechanical and Plumbing Permit Fees. The Building Department calculates the plan

review fees for each of these permits as 25% of the individual permit fees. The tables the Building Department uses to calculate these fees are the following:

Table 4. Electrical Permit Fees
Table 5. Mechanical Permit Fees
Table 6. Plumbing Permit Fees

Step 4: Additional Permits

Depending upon your project, other permitting fees may apply.

Step 4a. If your project is privately funded; it will disturb a cumulative acre or more of ground; and storm water runoff from the project will flow into "waters of the United States" your project is likely to require a storm water permit. The North Pole Municipal Code, Title 15; Chapter 15.66 Construction Site Storm Water Runoff details storm water permitting requirements. In addition, if your project will discharge storm water runoff directly into "waters of the US" or the storm water conveyance system, it must comply with Title 15; Chapter 15.74 Post-Construction Storm Water Management. If your project requires a storm water permit, you will also be required to submit a storm water pollution prevention plan (SWPPP). Storm Water Permit Fees include SWPPP plan review and inspection fees. You can estimate these fees based upon Table 7 Storm Water Permit Fees.

Step 4b. Water and/or Sewer Utility Connection Fees

If your project includes connecting to the City of North Pole water and/or sewer system, you must get a Utility Tie-In Permit and have the work inspected by the Utility Department. According to the North Pole Municipal Code, any occupied structure within 200 feet of a water or sewer main must connect to the utility system; otherwise, the property owner will be charged monthly the flat utility rate. See the North Pole Municipal Code, Title 13, Chapter 13.12; Section 13.12.090 Compulsory connection to City water and sewer utility. Utility tie-in fees are presented in Table 8 Utility Tie-In Fees.

Step 4c. Excavation of a City Right-of-Way Fees

If your project includes excavation of a City-owned right-of-way (ROW), for example, road, sidewalk or alley, there are fees associated with the excavation. Excavation of a City ROW also requires submission of a bond to ensure that the ROW is reconstructed. You can estimate excavation permit fees using Table 9a Excavation Permit Fees and the required Excavation Bond using Table 9b.

CHAPTER 6
TYPES OF CONSTRUCTION

SECTION 601
GENERAL

601.1 Scope. The provisions of this chapter shall control the classification of buildings as to type of construction.

SECTION 602
CONSTRUCTION CLASSIFICATION

602.1 General. Buildings and structures erected or to be erected, altered or extended in height or area shall be classified in one of the five construction types defined in Sections 602.2 through 602.5. The building elements shall have a *fire-resistance rating* not less than that specified in Table 601 and exterior walls shall have a *fire-resistance rating* not less than that specified in Table 602. Where required to have a *fire-resistance rating* by Table 601, building elements shall comply with the applicable provisions of Section 703.2. The protection of openings, ducts and air transfer openings in building elements shall not be required unless required by other provisions of this code.

602.1.1 Minimum requirements. A building or portion thereof shall not be required to conform to the details of a type of construction higher than that type which meets the minimum requirements based on occupancy even though certain features of such a building actually conform to a higher type of construction.

602.2 Types I and II. Types I and II construction are those types of construction in which the building elements listed in Table 601 are of noncombustible materials, except as permitted in Section 603 and elsewhere in this code.

602.3 Type III. Type III construction is that type of construction in which the exterior walls are of noncombustible materials and the interior building elements are of any material permitted by this code. *Fire-retardant-treated wood* framing complying with Section 2303.2 shall be permitted within *exterior wall* assemblies of a 2-hour rating or less.

602.4 Type IV. Type IV construction (Heavy Timber, HT) is that type of construction in which the exterior walls are of noncombustible materials and the interior building elements are of solid or laminated wood without concealed spaces. The

For SI: 1 foot = 304.8 mm.

a. Roof supports: Fire-resistance ratings of primary structural frame and bearing walls are permitted to be reduced by 1 hour where supporting a roof only.

b. Except in Group F-1, H, M and S-1 occupancies, fire protection of structural members shall not be required, including protection of roof framing and decking where every part of the roof construction is 20 feet or more above any floor immediately below. Fire-retardant-treated wood members shall be allowed to be used for such unprotected members.

c. In all occupancies, heavy timber shall be allowed where a 1-hour or less fire-resistance rating is required.

d. An approved automatic sprinkler system in accordance with Section 903.3.1.1 shall be allowed to be substituted for 1-hour fire-resistance-rated construction, provided such system is not otherwise required by other provisions of the code or used for an allowable area increase in accordance with Section 506.3 or an allowable height increase in accordance with Section 504.2. The 1-hour substitution for the fire resistance of exterior walls shall not be permitted.

e. Not less than the fire-resistance rating required by other sections of this code.

f. Not less than the fire-resistance rating based on fire separation distance (see Table 602).

details of Type IV construction shall comply with the provisions of this section. *Fire-retardant-treated wood* framing complying with Section 2303.2 shall be permitted within exterior wall assemblies with a 2-hour rating or less. Minimum solid sawn nominal dimensions are required for structures built using Type IV construction (HT). For glued-laminated members the equivalent net finished width and depths corresponding to the minimum nominal width and depths of solid sawn lumber are required as specified in Table 602.4.

602.4.1 Columns. Wood columns shall be sawn or glued laminated and shall not be less than 8 inches (203 mm), nominal, in any dimension where supporting floor loads and not less than 6 inches (152 mm) nominal in width and not less than 8 inches (203 mm) nominal in depth where supporting roof and ceiling loads only. Columns shall be continuous or superimposed and connected in an *approved* manner.

602.4.2 Floor framing. Wood beams and girders shall be of sawn or glued-laminated timber and shall be not less than 6 inches (152 mm) nominal in width and not less than 10 inches (254 mm) nominal in depth. Framed sawn or glued-laminated timber arches, which spring from the floor line and support floor loads, shall be not less than 8 inches (203 mm) nominal in any dimension. Framed timber trusses supporting floor loads shall have members of not less than 8 inches (203 mm) nominal in any dimension.

602.4.3 Roof framing. Wood-frame or glued-laminated arches for roof construction, which spring from the floor line or from grade and do not support floor loads, shall have members not less than 6 inches (152 mm) nominal in width and have not less than 8 inches (203 mm) nominal in depth for the lower half of the height and not less than 6 inches (152 mm) nominal in depth for the upper half. Framed or glued-laminated arches for roof construction that spring from the top of walls or wall abutments, framed timber trusses and other roof framing, which do not support floor loads, shall have members not less than 4 inches (102 mm) nominal in width and not less than 6 inches (152 mm) nominal in depth. Spaced members shall be permitted to be composed of two or more pieces not less than 3 inches (76 mm) nominal in thickness where blocked solidly throughout their intervening spaces or where spaces are tightly closed by a continuous wood cover plate of not less than 2 inches (51 mm) nominal in thickness secured to the underside of the members. Splice plates shall be not less than 3 inches (76 mm) nominal in thickness. Where protected by *approved* automatic sprinklers under the roof deck, framing members shall be not less than 3 inches (76 mm) nominal in width.

Wood floors shall be of sawn or glued-laminated planks, splined or tongue-and-groove, of not less than 3 inches (76 mm) nominal in thickness covered with 1-inch (25 mm) nominal dimension tongue-and-groove flooring, laid crosswise or diagonally, or 0.5-inch (12.7 mm) particleboard or planks not less than 4 inches (102 mm) nominal in width set on edge close together and well spiked and covered with 1-inch (25 mm) nominal dimension flooring or $^{15}/_{32}$-inch (12 mm) wood structural panel or 0.5-inch (12.7 mm) particleboard. The lumber shall be laid so that no continuous line of joints will occur except at points of support. Floors shall not extend closer than 0.5 inch (12.7 mm) to walls. Such 0.5-inch (12.7 mm) space shall be covered by a molding fastened to the wall and so arranged that it will not obstruct the swelling or shrinkage movements of the floor. Corbeling of masonry walls under the floor shall be permitted to be used in place of molding.

602.4.5 Roofs. Roofs shall be without concealed spaces and wood roof decks shall be sawn or glued laminated, splined or tongue-and-groove plank, not less than 2 inches (51 mm) nominal in thickness, $1^{1}/_{8}$-inch-thick (32 mm) wood structural panel (exterior glue), or of planks not less than 3 inches (76 mm) nominal in width, set on edge close together and laid as required for floors. Other types of decking shall be permitted to be used if providing equivalent *fire resistance* and structural properties.

602.4.6 Partitions. Partitions shall be of solid wood construction formed by not less than two layers of 1-inch (25 mm) matched boards or laminated construction 4 inches (102 mm) thick, or of 1-hour fire-resistance-rated construction.

602.4.7 Exterior structural members. Where a horizontal separation of 20 feet (6096 mm) or more is provided, wood columns and arches conforming to heavy timber sizes shall be permitted to be used externally.

602.5 Type V. Type V construction is that type of construction in which the structural elements, *exterior walls* and interior walls are of any materials permitted by this code.

SECTION 603
COMBUSTIBLE MATERIAL IN TYPE I AND II CONSTRUCTION

603.1 Allowable materials. Combustible materials shall be permitted in buildings of Type I or II construction in the following applications and in accordance with Sections 603.1.1 through 603.1.3:
